

AI Development

Track 03 - AI Solutions Engineering

ASSIGNMENT 3

Prompt Engineering Utility Platform

Objective

Build a prompt generator that converts user goals into professional structured prompts.

Professional Scope

Prompt builder must include role, task, context, constraints, examples, output format, tone, success criteria, and negative instructions. Include save/load for generated prompt examples.

Deliverables

- Prompt generator app (deployed link).
- Saved prompt examples (at least 5).
- README with features, setup, and usage guide.
- AI_USAGE.md documenting tools and prompt patterns.
- 5 generated sample prompts for different use cases.

Quality Bar

Generated prompts must be reusable for development, writing, design, debugging, or business tasks. All input fields must contribute meaningfully to the final prompt, and saved prompts must be retrievable and editable. UI must be clean and guide the user through prompt creation.

Suggested Tools

React

Local Storage

Firebase

Prompt Pattern Library

Mandatory Submission Package

GitHub Repository	Use naming format: ProjectName-InnoViast. Clean folders, useful commits, and a clear branch history.
README.md	Overview, problem statement, features, tech stack, setup steps, screenshots, deployment link, and learning outcomes.
Live Preview	Vercel, Netlify, Render, Firebase, Expo preview, Streamlit, or equivalent based on project type.
Demo Media	1-2 minute screen recording plus 3-5 high-quality screenshots.
Progress Evidence	Screenshots of design, development, bugs fixed, and final improvements.

■ Working Rules

- You may use AI tools for ideation, debugging, UI suggestions, and documentation, but you must understand and explain your own work.
- Keep the scope clear and small - build a complete feature well instead of an unfinished large one.
- Never commit API keys, passwords, tokens, or private credentials to GitHub.
- Post your progress and demo professionally on LinkedIn / Instagram / Facebook where required by the mentor team.

Evaluation Weighting

Project Functionality	30%
UI/UX Quality	20%
Code Structure	15%
GitHub Management	10%
Creativity & Problem Solving	10%
Presentation & Public Showcase	10%
Consistency & Deadline Discipline	5%
